The ultimate Host Intrusion Prevention System (HIPS) for protection against Malicious Software including Rootkits

Exhaustive Realtime Protection - AntiHook detects and stops attacks in real-time, following the rule "prevention is better than cure".

Complementary to existing anti-virus, firewall and anti-spyware systems - in fact it even protects them and the operating system!

No Updates Required - AntiHook utilises advanced behaviour-based technology so no ongoing data definition updates and high subscription fees.

Zero-Day Protection - Be protected from new and unknown threats even before your anti-virus company responds to new threats and releases updates.
