

UberGallery for RavenNuke

2019-05-20 18:08:49 by papamike

UberGallery is an easy to use, simple to manage, web photo gallery written in PHP and distributed under the MIT License. UberGallery does not require a database and supports JPEG, GIF and PNG file types. Simply upload your images and UberGallery will automatically generate thumbnails and output standards compliant XHTML markup on the fly.

Features:

- Simple first time installation
- Database-less configuration
- Include galleries within pre-existing sites
- Create multiple galleries with a single installation
- Easily customize your gallery styles via CSS

UberGallery is now available for RavenNuke as a module from Papa Mike's Creations. Simply download the module, unzip it, add the path to your images and upload everything to your RavenNuke site. UberGallery will automatically read your image files and create thumbnails. It is fully supported by jquery and colorbox and I have also added a fully responsive theme.

[See demo ...](#)

Note: UberGallery requires PHP 5.2+ and the PHP-GD image library to work properly.
